ScoutDNS is next generation DNS filtering in the cloud. Easy to use, effective, and affordable, ScoutDNS enables protection for organizations of all kinds all over the world with our global anycast network.

Get Scout360

Protect devices on and off the network with Scout360, our anywhere roaming client for Windows and MacOS.

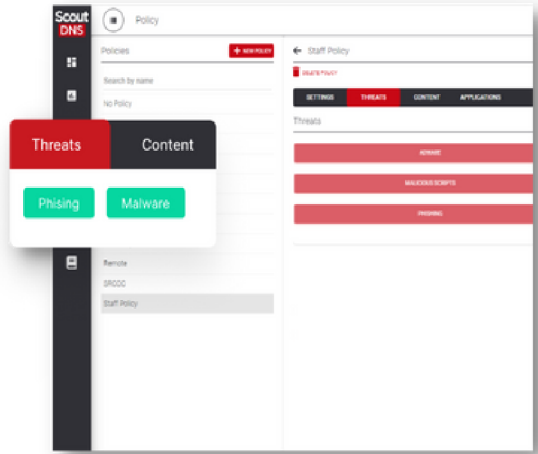

Content Filtering

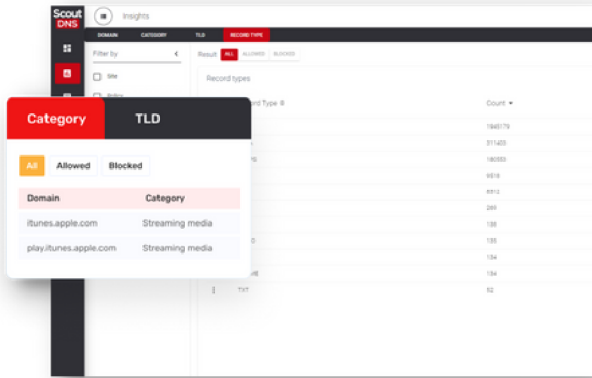

Manage 67+ categories, and create multiple allow/block lists that can be assigned globally or by policy. Add custom list entries direct from logs with a single click.

Threat Protection

Block phishing, malware, adware, and more with real-time updates from the Machine Learning threat detection engine. Manage suspect TLDs through our industry-first active TLD custom filtering lists.

Network Visibility

Gain insights into your network with 30 days of searchable real-time logs, view aggregate activity counts by domain, category, TLD, record type, and more all with drill-down navigation. Get DNS message inspection with full RDATA and message response views.

Global Anycast Network

- Low Latency From 15 Global Data Centers
- 100% Up-time Service Availability
